DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2,5,8 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2,5,14 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: the transmission type wavelength selecting optical element, the claim language does not recite where this optical element is located within the module.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential elements, such omission amounting to a gap between the elements. See MPEP § 2172.01. The omitted elements are: no structure has been recited within the claim language to obtain modulation of the laser beam.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2828

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1-3, 5-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Sonoda (JP10254001).

In the figures Sonoda illustrates a semiconductor laser, a wavelength conversion waveguide and a filter. The waveguide and the laser form an external resonant cavity by having a high reflective coating, which reflects the laser light and outputs second harmonic light. The narrow band pass filter will provide wavelength selection. See the figures for the different embodiments, which have similar structural arrangements to the claimed embodiments of applicant's invention and provide similar output beams.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4,25-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sonoda (JP10254001) in view of Nagai et al (PN 5,617,435).

Regarding claims 4,25,27,28.

In the figures Sonoda illustrates a semiconductor laser, a wavelength conversion waveguide and a filter. The waveguide and the laser form an external resonant cavity by having a high reflective coating, which reflects the laser light and outputs second

harmonic light. The narrow band pass filter will provide wavelength selection. See the figures for the different embodiments, which have similar structural arrangement to the claimed embodiments of applicant's invention and the similar output beam.

Sonoda does not illustrate providing modulation to the laser beam.

However, providing a wavelength conversion lasing system with an optical system which obtains wavelength modulation is well known in the art, as described in column 7 lines 27-30 and illustrated in prior art figure 13 of Nagai et al.

Regarding claim 26.

Providing modulation to a semiconductor laser by changing the current of the device is notoriously well known in the laser art.
